Lipofuscin is the name given to fine yellow-brown pigment granules composed of lipid-containing residues of lysosomal digestion. It is considered to be one of the aging or "wear-and-tear" pigments, found in the liver, kidney, heart muscle, retina, adrenals, nerve cells, and ganglion cells. It is specifically arranged around the nucleus, and is a type of lipochrome

An antibody (Ab), also known as an immunoglobulin (Ig), is a large, Y-shaped protein produced mainly by plasma cells that is used by the immune system to neutralize pathogens such as pathogenic bacteria and viruses. The antibody recognizes a unique molecule of the pathogen, called an antigen, via the Fab's variable region. Each tip of the "Y" of an antibody contains a paratope (analogous to a ...

The anti-double stranded DNA (anti-dsDNA) test is used to help diagnose lupus (systemic lupus erythematosus, SLE) in a person who has a positive result on a test for antinuclear antibody (ANA) and has clinical signs and symptoms that suggest lupus.. Typically, an ANA test is the first test performed to evaluate an individual for an autoimmune disorder.

Algumas subesp3cies de trigo, como a espelta, e algumas esp3cies relacionadas, como a cevada, o

centeio ou o triticales, também induzem sintomas da doença celíaca. [49] Uma pequena minoria das pessoas com a doença também reagem à aveia. [34] É provável que a aveia induza sintomas devido à contaminação cruzada com outros cereais nas zonas de cultivo ou nos canais de distribuição ...

Etimologia. La palabra proviene del latín virus, que hace referencia al veneno, o alguna sustancia nociva, y fue usada por primera vez en inglés en 1392. [16] Virulento, del latín virulentus (venenoso), data del 1400. [17] La mención de «agente que causa enfermedades infecciosas» se usó por primera vez en 1728, [16] antes del descubrimiento de los virus por Dimitri Ivanovski en 1892.

### Virus - Wikipedia, la enciclopedia libre

Un virus es un agente infeccioso que puede ser considerado un organismo vivo. Está formado por un ácido nucleico (ADN o ARN) rodeado por una capsula proteica denominada capsídeo. Los virus se reproducen al introducir su material genético en una célula huésped, donde se replican y se ensamblan nuevos virus. Los virus pueden causar enfermedades en humanos, animales y plantas. El primer virus descubierto fue el virus de la viruela en 1796. El primer virus descubierto en un animal fue el virus de la rabia en 1885. El primer virus descubierto en una planta fue el virus del mosaico del tabaco en 1892.

### Los virus son parásitos endocelulares obligados. – Virus, organismos endocelulares obligados

Los virus son todos parásitos endocelulares obligados. All'esterno delle cellule ospiti sono costituiti da un virione, formato da una capsula proteica (detta capside) contenente l'acido nucleico. I virus degli Eucarioti possono possedere anche una membrana che avvolge il capside detta peplos o pericapside. Talvolta tra il capside e il peplos presentano un ulteriore strato proteico che prende il ...
