efg's Color Reference Library -- Color Science / Color Theory

Color (American English), or colour (Commonwealth English), is the characteristic of human visual perception described through color categories, with names such as red, orange, yellow, green, blue, or purple. This perception of color derives from the stimulation of cone cells in the human eye by electromagnetic radiation in the visible spectrum. Color categories and physical specifications of ...

Color - Wikipedia

Obtaining predictable color reproduction in the digital darkroom can be a challenge because each device-- digital camera, scanner, monitor, or printer-- responds to or produces color differently.

Color management and color science: Introduction

modern color theory (concepts) This page introduces the conceptual basis of artists' "color theory" -- the traditional body of lore applied by painters and photographers to the design and creation of images.

handprint : modern color theory (concepts)

The concept of race as a rough division of anatomically modern humans (*Homo sapiens*) has a long and complicated history. The word race itself is modern and was used in the sense of "nation, ethnic group" during the 16th to 19th century, and only acquired its modern meaning in the field of physical anthropology from the mid 19th century. The politicization of the field under the concept of ...

Mathematics and Science in Preschool: Policy and Practice

To introduce the roles of the eye and brain in the perception of objects, including color. Many middle-school students do not think of light as something that travels from one place to another, and most tend to identify light with its source (e.g., light is in the bulb) or its effects (e.g., a patch ...
