An electric motor is an electrical machine that converts electrical energy into mechanical energy. Most electric motors operate through the interaction between the motor's magnetic field and winding currents to generate force in the form of rotation. Electric motors can be powered by direct current (DC) sources, such as from batteries, motor vehicles or rectifiers, or by alternating current (AC ...

Follow ups. I have captured the files using wget and they are identical.. I have had a look at the request and response headers using fiddler and they make no explicit mention of "Range" in the response header (or Accept-range in the request header), which lessens the likelihood that this is the multi-part request problem as suggested by mwalker.
