Signal processing is a subfield of mathematics, information and electrical engineering that concerns the analysis, synthesis, and modification of signals, which are broadly defined as functions conveying "information about the behavior or attributes of some phenomenon", such as sound, images, and biological measurements. For example, signal processing techniques are used to improve signal ...

The history of mathematical notation includes the commencement, progress, and cultural diffusion of mathematical symbols and the conflict of the methods of notation confronted in a notation's move to popularity or inconspicuousness. Mathematical notation comprises the symbols used to write mathematical equations and formulas. Notation generally implies a set of well-defined representations of ...

Mathematica, Maple, and similar software packages provide programs that carry out sophisticated mathematical operations. Applying the ideas introduced in Computer Algebra and Symbolic Computation: Elementary Algorithms, this book explores the application of algorithms to such methods as automatic simplification, polynomial decomposition, and polynomial factorization.

Welcome. The Computing + Mathematical Sciences (CMS) Department is nestled in the heart of Pasadena on the beautiful Caltech campus. CMS is home to outstanding students and researchers who share a passion for science and engineering, as well as a drive to investigate the most challenging, fundamental problems in computation and information.

(ACF) equal to an impulse. Most real noise is not really white, but colored in some respect. In fact, the term noise is often used rather loosely and is frequently used to describe signal contamination. For example, muscular activity recorded on the electrocardiogram (ECG) is usually thought of as noise or artifact.
