Instream River Training: Fundamentals and Practical Example â€”Actually the riverâ€™s flow is causing erosion, not the river bank! Flow bank erosion bank armoring standard solution â€” bank armoring = bank stability by means of riprap (expensive, not environment friendly)â€” treatment of symptoms (instead of treating the cause)Flow bank erosion

River training measures also reduce sediment transportation and thus minimize bed and bank erosion. Many river training structures are implemented in combination with bioengineering techniques to lessen the negative effects on environment and landscape (see Chapter 3). There are a number of types of river training structure.

River training is all engineering works constructed in a river that are required to guide and confine the flow to the river channel and to regulate the riverbed configuration for effective and safe movement of water, including ice and river sediment. River training works are used to stabilise or constrain a river.

harmonized. This paper presents the principles for river training and management. Modification of rivers dates from the earliest days of human settlement on the floodplains of the Nile, Indus, and Mesopotamian river systems and has increased throughout history with the reclamation of the valleys of most great rivers.
