History. The term endocrine disruptor was coined at the Wingspread Conference Centre in Wisconsin, in 1991. One of the early papers on the phenomenon was by Theo Colborn in 1993. In this paper, she stated that environmental chemicals disrupt the development of the endocrine system, and that effects of exposure during development are often permanent.

Phthalates are also found in modern electronics and medical applications such as catheters and blood transfusion devices. The most widely used phthalates are di(2-ethylhexyl) phthalate (DEHP), diisodecyl phthalate (DIDP), and diisononyl phthalate (DINP). DEHP was the dominant plasticizer used globally in PVC due to its low cost. Benzylbutylphthalate (BBP) is used in the manufacture of foamed ...

Since the publication of the Duchenne muscular dystrophy (DMD) care considerations in 2010, multidisciplinary care of this severe, progressive neuromuscular disease has evolved. In conjunction with improved patient survival, a shift to more anticipatory diagnostic and therapeutic strategies has occurred, with a renewed focus on patient quality of life.

Butylated hydroxyanisole (BHA): Studies demonstrating BHA's potential to disrupt endocrine functioning led the European Commission on Endocrine Disruption to list BHA as a Category 1 priority substance. This chemical is also listed as a carcinogen on California's Proposition 65. Butylated hydroxytoluene (BHT): BHT irritates the eyes and skin and may adversely affect one's growth rate ...

Unrecognized congenital hypothyroidism leads to mental retardation. Newborn screening and thyroid therapy started within 2 weeks of age can normalize cognitive development. The primary thyroid-stimulating hormone screening has become standard in many parts of the world. However, newborn thyroid screening is not yet universal in some countries.

Methods. In this multicentre, double-blind, randomised phase 3 study, women aged 18 years or older with hormone-receptor-positive, HER2-negative metastatic breast cancer that had progressed on previous endocrine therapy were stratified by sensitivity to previous hormonal therapy, menopausal status, and presence of visceral metastasis at 144 centres in 17 countries.

Endocrine disruption: There is evidence that synthetic musks disrupt hormones. Musk ketone, galaxolide, and tonalide alter estrogen activity, and both tonalide and galaxolide inhibit androgen and progesterone from binding to their receptors. Musk ketone, musk xylene, and tonalide have also increased the growth and multiplication of estrogen-responsive human breast cancer cells.
